SUMMARY

Software Engineer with 3+ years of experience building production frontend applications at PMaps, an AI-powered assessment SaaS platform. Architected a candidate assessment platform that has delivered 25,000+ assessments, led a team of 3 interns, and shipped revenue-driving client modules in Vue.js, Quasar, and React. A UX background means the interfaces I build are shaped around how people actually work.

SKILLS

Frontend: Vue.js, Nuxt.js, Quasar, React, JavaScript, HTML5, CSS3, Responsive Design

State & Storage: Pinia, Vuex, IndexedDB, localStorage, sessionStorage

Backend & Data: REST APIs, Supabase, SQL

Design & CMS: Figma, Webflow

Tools: Jira, Confluence, Google Analytics, Microsoft Clarity

EXPERIENCE

PMaps

Mumbai, India

Software Engineer

Jul 2024 – Present

- Architected the Candidate Assessment Platform frontend from the ground up in Quasar (Vue), leading a team of 3 interns (2 developers, 1 designer). The platform has delivered **25,000+ assessments** to date, with roughly two-thirds of traffic on mobile.
- Managed application state with Pinia and Vuex, and used IndexedDB, localStorage, and sessionStorage to persist assessment paper data in the browser.
- Built Test Creator, a self-serve module that lets clients create and configure their own assessments without relying on the internal team.
- Owned the architecture and development of the company's Webflow business website, restructuring content for discoverability and lifting engagement by **25%**.
- Developed analytics dashboard features in React, working across frameworks alongside the core Vue.js codebase.
- Verified features and validated data before every release, catching broken workflows before they reached clients.

Junior UX/UI Developer

Jul 2023 – Jul 2024

- Independently built client-facing Vue.js modules end to end, including Onboarding Journey, Test Library, and Test Report.
- Developed the self-serve signup and subscription flow that converts new sign-ups into paying customers, directly driving recurring revenue.
- Implemented plan-based feature access so each subscription tier unlocks the right set of platform capabilities.
- Turned recruiter workflow pain points into UI improvements, making recruiters roughly **30% faster** at core tasks.

Web Developer Intern

Dec 2022 – Jul 2023

- Built REST APIs for test duration and cooling-period rules, automating assessment access control and blocking early retakes to protect assessment integrity.
- Performed manual testing across the platform to catch regressions before release.

EDUCATION

Master of Computer Applications (MCA) – SVKM's NMIMS, Mumbai

2021 – 2023

HONORS & AWARDS

- 1st Prize, UX Hack – Razorpay Hackathon 2024 Aug 2024
