SUMMARY

Business and product-oriented professional with 3+ years of experience working across stakeholder management, requirement gathering, workflow optimization, UX design, and frontend development at an AI-powered assessment platform. Experienced in translating business requirements into scalable solutions by collaborating with business stakeholders, design teams, and engineering teams. Strong analytical mindset with hands-on exposure to SQL, Jira, Confluence, process improvement, and recruiter workflow transformation. Currently building ShellScholars, a portfolio registry platform focused on professional proof-of-work and digital identity.

EXPERIENCE

PMaps

UX/UI Developer – Product Experience

Thane, India

Jul 2023 – Present

- Collaborated with business stakeholders to understand recruiter workflow challenges and translated requirements into scalable solutions across Test Library, Billing, Invite Candidate, and User Journey modules, improving recruiter efficiency by 30%.
- Conducted requirement discussions, mapped user journeys, and converted business needs into UX flows, wireframes, user stories, and production-ready Vue.js implementations.
- Identified process bottlenecks in recruiter workflows and optimized user interactions, reducing friction across assessment management and candidate invitation journeys.
- Led the redesign and implementation of the company website using Webflow, improving content discoverability, user engagement, and overall platform experience by 25%.
- Migrated the Candidate Platform UI to Quasar Framework, improving maintainability, scalability, and development efficiency for future product enhancements.
- Worked closely with cross-functional stakeholders including product, business, design, and engineering teams to align requirements and deliver solutions within project timelines.
- Utilized SQL for data validation, feature verification, and troubleshooting application workflows during development and release cycles.

PMaps

Web Developer Intern

Thane, India

Dec 2022 – Jul 2023

- Developed Test Duration APIs to automate candidate assessment access control based on configurable scheduling rules.
- Built cooling-period functionality to prevent early assessment retakes, improving assessment integrity and operational compliance.
- Implemented Figma-driven interface enhancements that improved usability and reduced user friction across candidate assessment workflows.

PRODUCT PROJECTS

ShellScholars – Full-stack Portfolio Registry Platform

shellscholars.com

Independent Product Builder / Nuxt, Supabase

Ongoing

- Identified the challenge of fragmented professional proof-of-work spread across resumes, portfolios, repositories, and social platforms.
- Conducted problem exploration and designed an MVP focused on centralized professional identity management.
- Designed and developed landing pages, workspace onboarding, profession-based templates, URL claiming workflows, and dynamic profile generation systems.
- Building profile management, content management, and workspace customization capabilities using Nuxt and Supabase.
